Tianyu Chen

Bristol Robotics Lab, Bristol, UK • Tianyu.chen@bristol.ac.uk

Work

University of Bristol Bristol, UK
Research Associate Sep. 2025 to present
The VIVO Hub for Enhanced Independent Living (thevivohub.com)

- Developing fundamental soft-actuation technologies to support mobility and independent living for older adults.
- Researching electrostatic actuation as a lightweight replacement for the bulky motors and pneumatic systems in current exosuits.

Education

Nanyang Technological University Singapore
Ph.D., Mechanical Engineering Sep. 2025
Thesis: Scale-Inspired Layered Structure for Variable Stiffness and Shape Morphing

Northwestern Polytechnical University Xi'an, P. R. China
M.E., Solid Mechanics Mar. 2020

Northwestern Polytechnical University Xi'an, P. R. China
B.E., Engineering Mechanics Jul. 2017

Research Experience

Nanyang Technological University Singapore
Graduate Student with Prof. Yifan Wang 2021-2025
Development and application of the Scale-Inspired Layered Structure (SAILS), a soft robotic structure featuring inversely designed programmable surface patterns for simultaneous shape morphing and stiffness modulation.

- Developed computational algorithms and finite element models for the design and simulation of SAILS, leading to the successful fabrication of prototypes using 3D printing.
- Designed and implemented a SAILS-based soft amphibious robot with a custom mechatronic control system to achieve versatile locomotion across terrestrial and aquatic environments.
- Engineered a variable stiffness landing gear for drones based on SAILS, including design, performance evaluation using a custom drop test setup with piezoelectric force sensors, and integration into drone systems with in-flight control mechanisms for adaptive impact force mitigation.

Central South University Changsha, P. R. China
Research Assistant with Prof. Jianjun Li 2020-2021

- Developed finite element models to investigate the frictional and mechanical behavior of gradient and bimodal nanostructured metals during scratch tests.
- Revealed strain delocalization mechanisms in heterogeneous nanostructures leading to improved tribological properties compared to homogeneous counterparts.

Northwestern Polytechnical University Xi'an, P. R. China
Graduate Student with Prof. Chun Li 2017-2020

- Developed finite element models to investigate the deformation behavior of thin films on substrates, including metallic and metallic glass films.
- Revealed mechanisms for enhancing thin film ductility through substrate design and interfacial engineering, providing insights for improving the mechanical performance of thin film systems.

Teaching Experience

Nanyang Technological University Singapore
Teaching Assistant 2022-2025

- MA1008 - Introduction to Computational Thinking
- P3.3AE - Design and Implementation of Electrohydraulic Circuits
- MA1700 (A1.4) - Structural vibration analysis

Northwestern Polytechnical University Xi'an, P. R. China
Teaching Assistant 2018-2019

- Theoretical Mechanics

Scholarships and Awards

NTU Research Scholarship, Nanyang Technological University (2021-2024)
Outstanding Master's Thesis Award, Northwestern Polytechnical University (2020)
Second-class academic scholarship for postgraduates, Northwestern Polytechnical University (2018)
First-class academic scholarship for postgraduates, Northwestern Polytechnical University (2017, 2019)
Third-class prize of the National Zhou Peiyuan Competition on Mechanics (2015)
Second-class prize of the Programming Star Challenge, Northwestern Polytechnical University (2015)
Third-class prize of the Fifth Smartcar Competition, Northwestern Polytechnical University (2015)
Third-class prize of the Mathematical Modeling Competition, Northwestern Polytechnical University (2014)
Second-class scholarship, Honors College, Northwestern Polytechnical University (2014-2016)

Professional Skills

Programming Language: Python; MATLAB; C; Java; Fortran; AutoLisp
Software: Finite Element Analysis: ABAQUS
Computer-Aided Design: Solidworks; Rhino; FreeCAD; AutoCAD
Others: Origin Pro; Adobe Photoshop; Adobe Illustrator; Adobe Premiere Pro; Blender
Hardware and Equipment: FDM 3D Printer: Raise3D Pro 2; Qidi i-mate-S
SLA 3D Printer: Formlabs Form 2
